*: The terminal block included with the product is a 38-point terminal block.

The universal conversion adapter (large type) can be used in the following system replacement.

- MELSEC-A series → MELSEC-Q series
- SYSMAC C series (large type) → MELSEC-Q series
- New satellite JW series (large type) → MELSEC-Q series
- MEMOCON-SC GL series (large type) → MELSEC-Q series

Base adapters

The same base adapters used to replace the MELSEC-A series with the MELSEC-Q series are used.

By using a base adapter, the MELSEC-Q series base unit and the conversion adapter support flange can be installed at the same time without drilling any additional installation holes.

Note

- Four additional installation holes (M5 screw size) and four M5 screws need to be prepared by the user to install the base adapter to the control panel.

The base units (*1 to *5) can be installed to different types of base adapters. Select the optimum base adapter.

Conversion adapter support flanges (required)

The same base adapters used to replace the MELSEC-A series with the MELSEC-Q series are used.

A conversion adapter support flange secures the lower part of a conversion adapter. One support flange is required per base unit when a conversion adapter is used.

Note

- Two additional installation holes (M4 screw size) are required to install the conversion adapter support flange to the control panel.
When a base adapter is used, drilling of additional installation holes is not required.

Conversion adapter support flange model	Specifications

ERNT-AQF8	8-slot conversion adapter support flange
ERNT-AQF5	5-slot conversion adapter support flange
ERNT-AQF3	3-slot conversion adapter support flange
